Freshworks STS Software Academy

Dear Candidate,

Design a social media homepage featuring posts along with their corresponding comments.

Utilize the provided mock API for data retrieval. Fetch posts from the following endpoint: https://jsonplaceholder.typicode.com/posts.

Additionally, retrieve comments associated with each post by utilizing the endpoint: https://jsonplaceholder.typicode.com/comments?postId=1, where "1" should be replaced with the respective post ID.

Incorporate a local file containing user names, and map them to the various user IDs. To add visual interest, utilize https://picsum.photos/ to generate random images for user avatars.

Submission Details:

- Complete the project within 7 days from the date of assignment.
- Submit your solution via a Git repository. Ensure that the repository is publicly accessible.
- Additionally, include a screenshot of the final design in your submission.
